

How-to: Turn on the Pillar Screens

Introduction

The “pillar screens” are the four large screens in the main auditorium which display the same image as the projected image on the main screen above the stage.

Touch Screen

These screens are turned on using the AMX touch-screen unit to the right of the iMac.

Remote Control

If it is not possible to use the touch screen, or the screens are not responding to the touch screen, it is also possible to control them using their remote control. The same remote control is used to operate all four screens. This is kept in the tray on the back right of the projection desk.
