

How-to: Change the External Screen Source

Introduction

The 'external screens' are the Babies' Room screen and the Reception screen. These screens can mirror the main screen or display the stage camera feed.

The stage camera feed is generally used during worship times, notices, and during live preaches. The main screen should be mirrored at all other times. It is particularly important to mirror the main screen during video preaches.

The source is changed using the AMX touch screen unit to the right of the iMac.

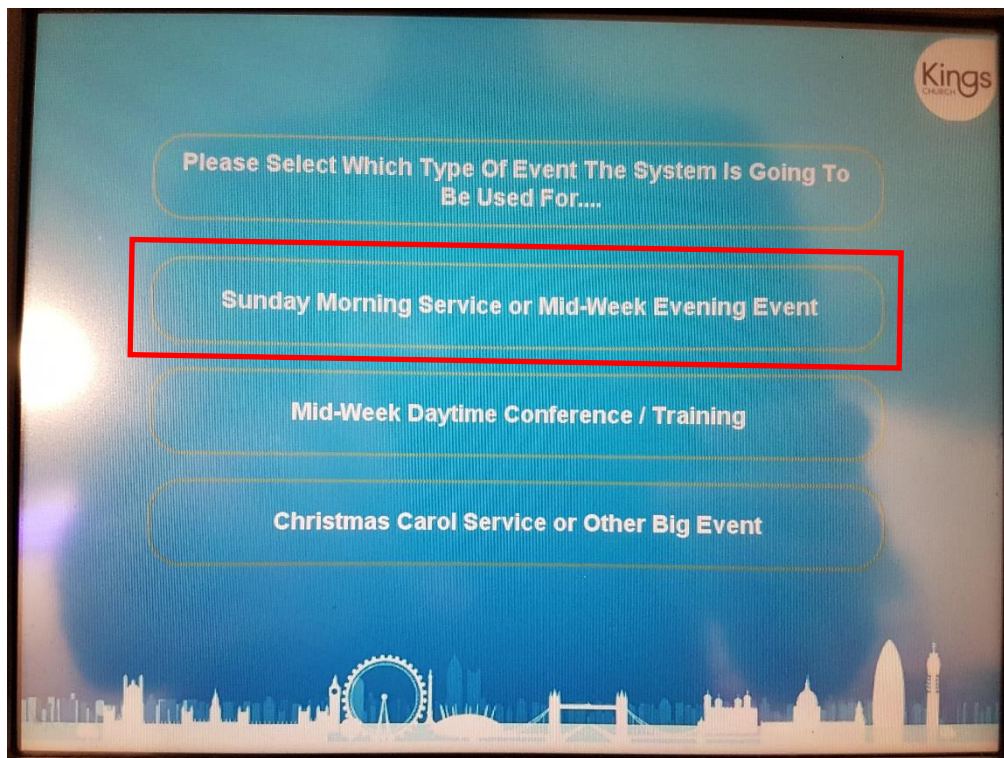

Navigate to Control Screen

Using the AMX touch screen navigate to the appropriate control screen as described below. If the current screen is not shown in the sequence below you can return to the previous screen by pressing the 'King's Church' icon in the top right corner of the screen.

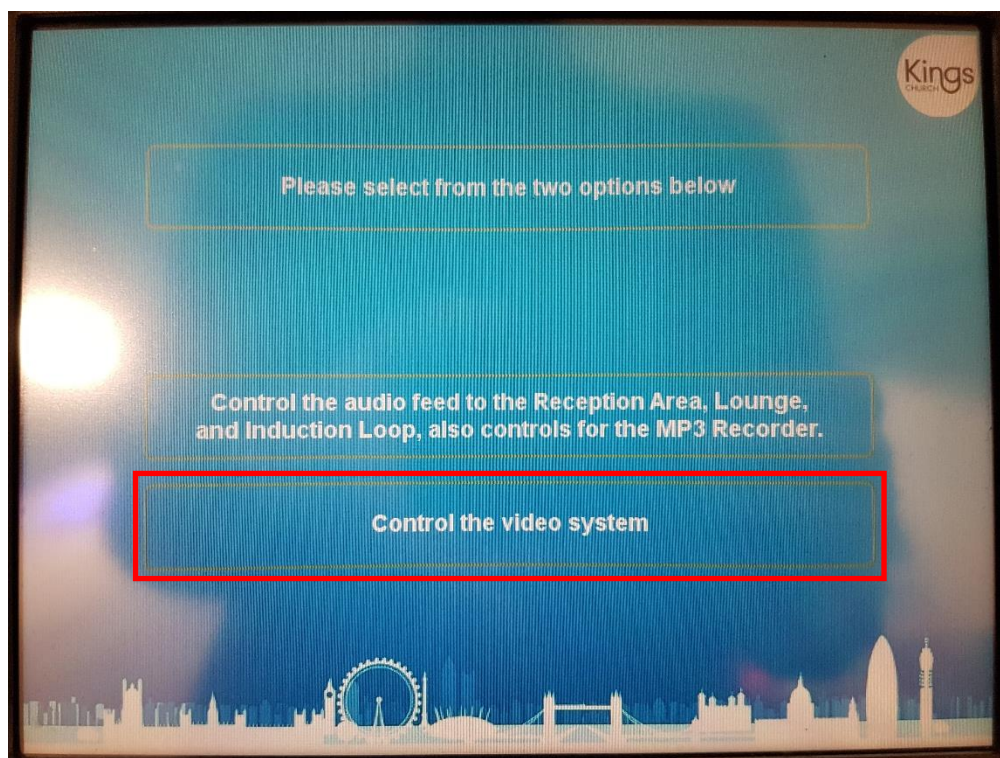

On the welcome screen click on the "ANY" button.

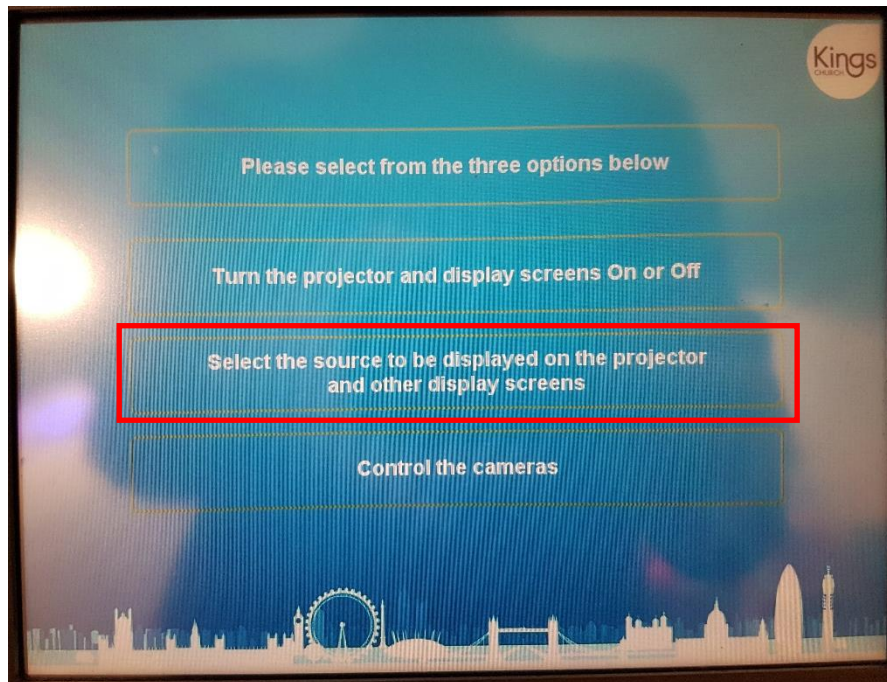

Press the "Sunday Morning Service or Mid-Week Evening Event" button.

Press the "Control the video system" button.

Press the "Select the source to be displayed on the projector and other display screens" button.

Select appropriate option

Under "Please Select The Source For The Rear Screens And Other Areas..." select "Copy Main Screen" to mirror the main screen, or "Stage Camera" to show the stage camera feed. The current source will be highlighted in dark blue.
