

How-to: Check Videos

Introduction

Any videos to be used during the service will usually have been checked earlier in the week but it is standard practice to check them again immediately before the service.

How to

The video check involves checking that the image is not distorted or discoloured and that the audio is working correctly. Liaise with the P.A. desk to check the audio as well as the video. It is best to check the video at several points.

It is not possible to check the video while the worship band is rehearsing so the check usually happens after the initial briefing.

If a live preach is scheduled, still check the back-up video preach.
